Real-world pain points shared by our **AWS** partners

Confidence & security know-how

- “How do I secure an AWS account for my customer?”
- Security in-depth exceeds our AWS expertise level
- “We use AWS Organizations for our customers – aren't we safe?”

Security guidance

- What AWS best practices do you advise?
- “Which are the minimum required recommended security basics you would recommend?”?

Ownership & diversification

- Security falls entirely to the SMB customer if no managed service was ordered.”
- Multi-Account Landing Zone slow us down — we just want simple but secure AWS accounts to start quickly.

Problem areas

Organizational and technical level

Compliance & Governance

 Compliance requirements

 Governance & policies

 Documentation & testing

Resources & Speed

 Limited staff & time

 Manual setup
→ drifts

 Cloud-skill gap

Handover & Ownership

 Split responsibilities

 Conceptual & interface gaps

 Reseller-to-customer hand-off

AWS Partner expertise \neq customer cloud maturity!

What if?

**Kick-start
a fully secured,
best-practice AWS
account in just 5
minutes — no AWS
expertise
needed.**

Ingram Micro InstantFramework for AWS

Ingram Micro InstantFramework for AWS (IMIF) kickstarts new AWS accounts with secure, efficient setup based on proven best practices.

Secure

Automated

Instant

Standardized

Highly secured AWS account – < \$50 monthly cost (MRR).

Start secure from day 1.

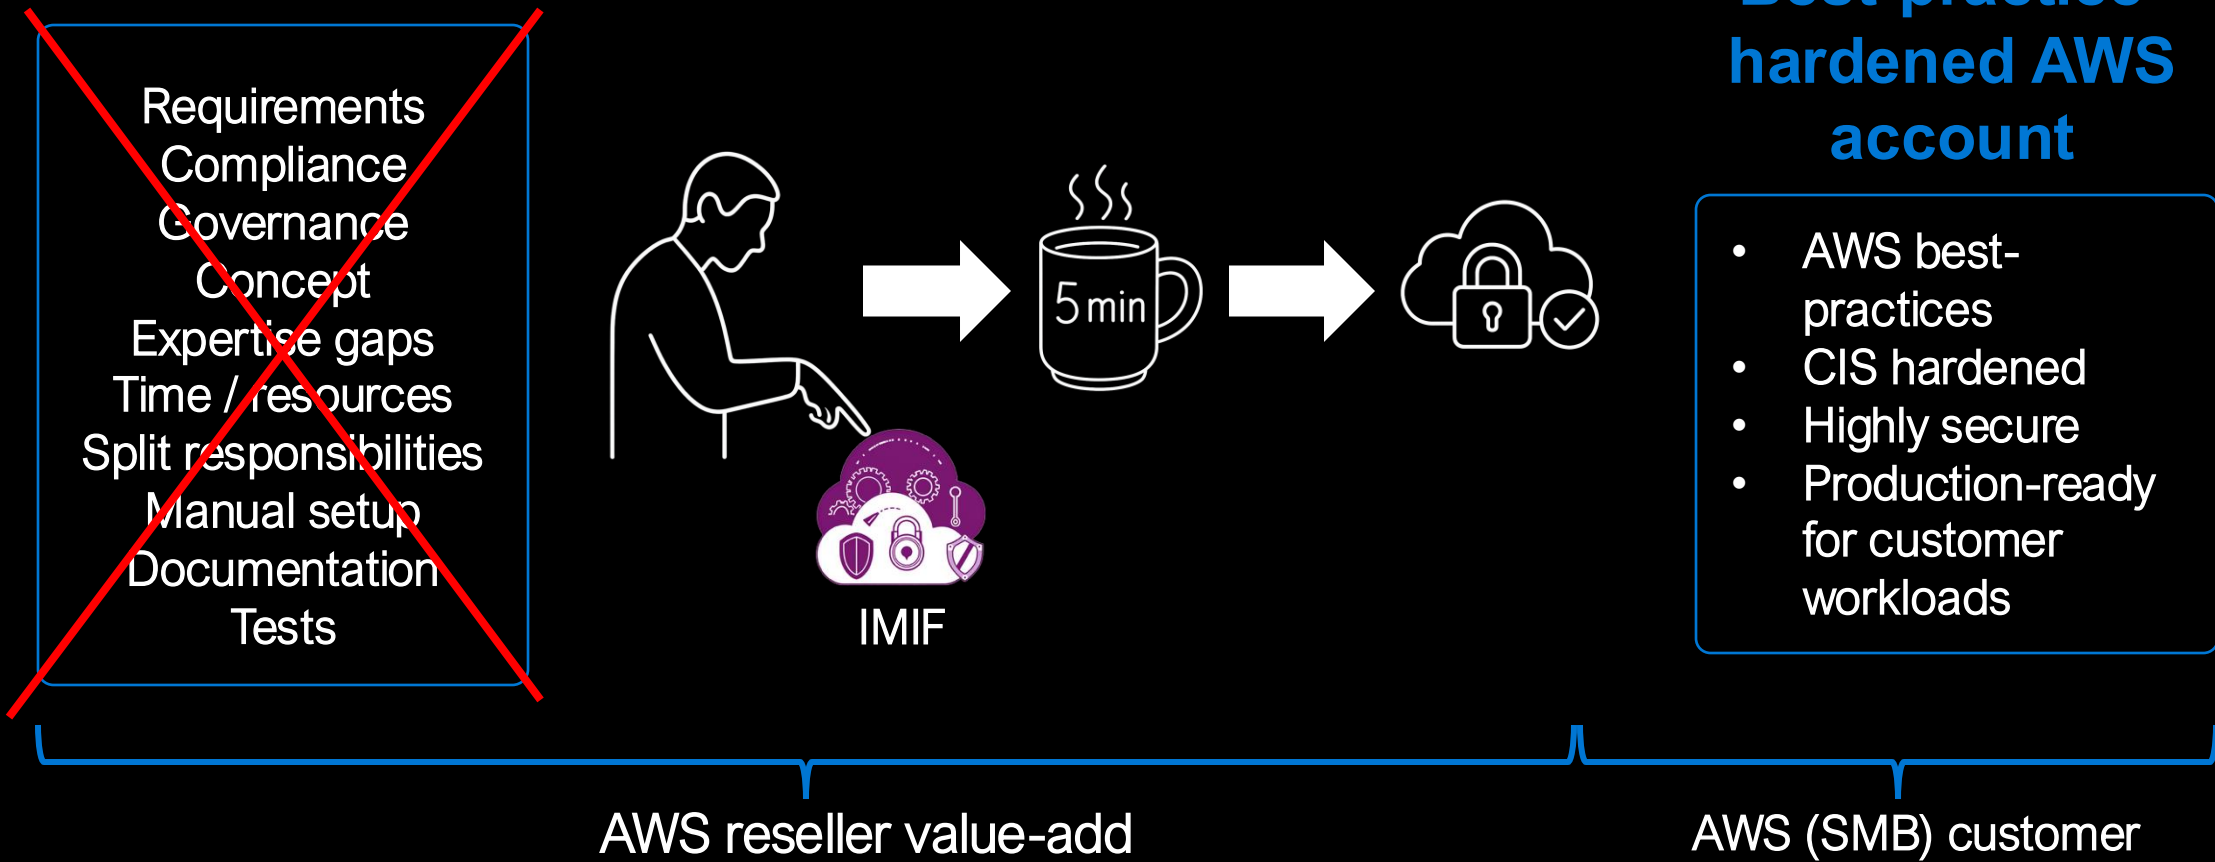

Proprietary information of Ingram Micro — Do not distribute or duplicate without Ingram Micro's express written permission.

Everyone gets a secure AWS account!

This is how IMIF works

Info: Aligned with AWS Well-Architected Framework and AWS Cloud Adoption Framework.

AWS Security Hub Standards

... which are enabled by IMIF

AWS Foundational Security Best Practices v1.0.0 (FSBP)

- A set of AWS Security Hub controls to detect deviations from [AWS security best practices](#).
- Continuously evaluates accounts and resources, providing actionable guidance.
- Covers multiple AWS services, with controls categorized by security function.

CIS AWS Foundations Benchmark v3.0.0

- Developed by the [Center for Internet Security \(CIS\)](#) to guide secure AWS configurations.
- Provides best practices to protect cloud services, operating systems, and networks.
- Helps protect systems across cloud services, OS, and networks.

Increased **Security**

Reduced effort/time

Low costs

Valued-add for your customers

Key takeaways

Why IMIF matters

Quickly deliver secure AWS accounts – giving customers the freedom to build on a **hardened, production-ready single account landing zone.**
